Statement on principal adverse impacts of investment decisions on sustainability factors

21 June 2024

Financial market participant:

iM Global Partner Asset Management S.A.

LEI: 549300ZMLIWSWKORN073

Summary

iM Global Partner Asset Management S.A. ("**iMGPAM**" or the "**Management Company**") considers principal adverse impacts of its investment decisions on sustainability factors. The present statement is the consolidated statement on principal adverse impacts on sustainability factors of iMGPAM in relation to the Funds under its management that have been classified as article 8 or 9 under the Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR"). For the period under review, this represents 12 article 8 SFDR and 1 article 9 SFDR Funds.

Reference to Funds in this statement means each relevant compartment of iMGP, the umbrella company ("**iMGP**" or the "**SICAV**"). iMGP is a societe d'investissement a capital variable that qualifies as a UCITS and operates under the supervision of the Commission de Surveillance du Secteur Financier in Luxembourg.

iMGPAM has delegated the investment management decisions on the different Funds to external Sub-Managers so as to benefit from the expertise of some of the world's leading investment managers across asset classes. As such, the principal adverse impact of investment decisions made by the Sub-Managers on behalf of these Funds is included in the consideration of principal adverse impact at the level of iMGPAM.

This statement on principal adverse impacts on sustainability factors covers the reference period from 1 January to 31 December 2023.

Sustainability factors are environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Principal adverse impact ("PAI") indicators are a way of measuring how our investment decisions negatively impact sustainability factors. iMGPAM manages a series of Funds which are classified as article 8 or article 9 SFDR for which several PAI indicators are used as indicated in the relevant pre-contractual information. The data included in this document has been aggregated across the investments managed by iMGPAM for the year 2023, unless stated otherwise. In total, this represents information on a wide range of PAI indicators relating to greenhouse gas emissions, biodiversity, water, waste, social and employee matters, human rights, anti-corruption and anti-bribery matters.

These indicators vary depending on the investment strategy of each relevant Fund and strongly depend on data quality and availability. In whole, they offer an overview of the relevant aggregate adverse impact profile of Funds for which iMGPAM acts as management company.

iMGPAM works alonsige the Sub-Managers to measure, analyse, monitor and report on the potential adverse impacts of the investment decisions that the latter make when managing each Fund.

Description of the principal adverse impacts on sustainability factors

Adverse sustainability indicator	Metric			Impact 2023	Impact 2022	Explanation	Actions taken, and actions planned and targets set for the next reference period

Description of policies to identify and prioritise principal adverse impacts on sustainability factors

<u>Governance</u>

iMGPAM has put in place an ESG Policy which sets out the guiding principles around sustainability and ESG integration in relation to the different Funds it manages. The current version of the ESG Policy was approved by the Board of Directors of iMGPAM (the "**Board**") in December 2023 and is reviewed on an annual basis.

From an organisational perspective, the Asset Management team of the Management Company leads the process of collaboration and communication with the various Sub-Managers. This includes the review and assessment of the PAI indicators provided by the latter on an ongoing basis. Additionally, the Risk Management Team will monitor and control that investment restrictions relevant to a particular Fund are complied with (e.g. no investment in companies involved in the production of controversial weapons). Finally, the Legal and Compliance team will own regulatory oversight to ensure that iMGPAM fulfils its regulatory obligations (including on sustainability related disclosures) at all times.

iM Global Partner SAS (the parent company of iMGPAM) has established an ESG Committee which is responsible for approving and defining the implementation of the ESG policy of the iM Global Partner group, including that of iMGPAM. The ESG Committee generally meets on a bimonthly basis and reports to the Board, who is ultimately responsible for ensuring that iMGPAM complies with its legal and regulatory obligations, including the production of this statement.

As described in the ESG Policy, iMGPAM defines, with the support of and in collaboration with each Sub-Manager how and when ESG criteria will be incorporated into the investment process of each relevant Fund, including definition of relevant PAI on sustainability factors. The sustainability approach should be relevant for a particular asset class and consistent with the investment philosophy of a particular Sub-Manager.

On an annual basis (or at a lower frequency if and when needed), the Management Company will perform a due diligence on the Sub-Managers, which will include a review of their procedures, policies, processes and controls with regards to ESG and sustainability. Specific reporting requirements are agreed in writing between iMGPAM and each Sub-Manager and included in the relevant investment management agreement.

<u>Methodology</u>

The Funds generally integrate material ESG factors as part of an evaluation of a company's financial risks and the level of integration will depend on the asset class and the Sub-Manager. Some Funds may include criteria that exclude investments in issuers with negative social or environmental impact or which do not follow good governance practices, as well as positive eligibility criteria, including a target on their ESG quality score. Investments in companies actively engaged in producing controversial weapons are prohibited across the range, as further developed below.

Other Funds may rely on a full ESG integration approach where each invested security will be subject to a thorough assessment based on a variety of ESG factors provided by external sources complemented by the relevant Sub-Manager internal research. While the Sub-Manager may on a case-by-case basis retain instruments for the portfolio showing lower ESG characteristics, an important part of the portfolio shall be invested in financial instruments considered by the Sub-Manager as showing high ESG characteristics according to its own ESG policy.

When applicable, the exclusion lists and the positive eligibility criteria will be supplemented by consideration of one or more PAI in the investment decision process.

In relation to our article 9 SFDR Fund, namely iMGP Sustainable Europe Fund, and as further described in the table above, the Sub-Manager has considered all mandatory and four optional PAI in the application of its investment process. The Fund's thematic structure means that it is largely absent from sectors with major social and environmental impacts, with materiality defined by the International Sustainability Standards Board (SASB guidance). Nonetheless, the Sub-Manager systematically integrates analysis of material ESG issues into its fundamental stock level analysis, and investment monitoring process. Where the Sub-Manager feels a portfolio company is not performing to the appropriate standards, it uses a number of engagement methods to encourage improvement.

More specifically, the investment process analyses and assesses potential negative impacts at the product level (significant social and environmental impact). The Sub-Manager also integrates analysis of material ESG issues into its assessment of a company's operations using a SASB-derived framework and utilises third party screening to ensure portfolio holdings are in compliance with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. SASB standards highlight key sustainability information that is reasonably likely to affect the financial performance of a company within an industry.

The Sub-Manager does not invest in companies that would offend the Do No Significant Harm (DNSH) material criteria for the business as a whole. The DNSH criteria ensures that no portfolio company would significantly harm any of the six environmental objectives within the EU

Taxonomy Regulation¹. These six objectives are: climate change mitigation; climate change adaptation; sustainable use and protection of water and marine resources; circular economy; pollution prevention and control and; protection and restoration of biodiversity and ecosystems.

Data sources

Sustainalytics is iMGPAM's main date source. Sub-Managers may compile and provide data from various other sources (whether internal or external, such as ISS, Clarity AI and Impact Cubed) to supplement the Management Company's analysis.

Some PAI such as the carbon footprint and the fossil fuel exposures require straightforward calculations based on Sustainalytics reports run by the Management Company and the Sub-Managers. For 2023, we used quarterly data points and we averaged the results to obtain the reported figures. UN Global Compact Principles infringement and Controversial weapons exposure data are monitored by our Risk Management team with the assistance of the relevant Sub-Managers.

The PAIs relevant to our article 8 SFDR Funds fall within the full discretion of the Sub-Managers, i.e. any mathematical concept such as "probability of occurrence" and/or "severity of PAI" does not correspond to a probability continuum but rather to a "include or exclude" decision of the relevant Sub-Manager.

The Management Company, with the assistance of the relevant Sub-Manager, will monitor closely the regulatory evolution and the progress made in terms of data accuracy and availability and may adapt its approach accordingly in line with the investment objective and policy of each Fund.

Engagement policies

iMGPAM actively uses its ownership rights to engage with investee companies of relevant Funds on various asset classes, namely within the equities space.

For this purpose, it has put in place a Proxy Voting Policy whose guiding principles when taking decisions in relation to proxy voting should (i) favour proposals that in the view of the Management Company tend to maximize the value of the shareholder's investment, (ii) not be influenced by conflicts of interest and (iii) factor the ESG aspects if relevant for a concerned Fund. This is an overarching policy which applies

¹ Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment, and amending Regulation (EU) 2019/2088.

across the fund range of iMGPAM and therefore may capture any PAI indicator in line with the relevant Fund's investment objective and policy. The current policy was approved by the Board in March 2023 and is reviewed on an annual basis.

iMGPAM delegates its voting rights to the relevant Sub-Manager who, in turn, has adopted its own engagement and proxy voting policies. Some of the Sub-Managers rely on the services of an external proxy service provider and iMGPAM has access to the relevant reporting tool.

To ensure proper supervision and follow-up, each Sub-Manager maintains a register of the votes exercised and iMGPAM ensures that the Board is informed regularly about the voting undertaken in respect of the relevant Funds.

In relation to iMGP Sustainable Europe Fund, the Sub-Manager's Stewardship & Engagement Policy is based on the UK's Financial Reporting Council's Stewardship Code which sets out 12 principles covering purpose and governance of the policy, how good practice is integrated into its investment approach, how it engages with investee businesses and how it exercises its rights and responsibilities. Assessment of governance practices at investee companies is a core element of the Sub-Manager's fundamental quality analysis, representing 20% of the fundamental quality score.

The Sub-Manager of our article 9 SFDR Fund thinks long term and so its investment time horizon is well-above industry averages².1 As a result, the Sub-Manager behaves as owner of the Fund's investee companies, rather than as short-term market traders. This directly enables the team to effectively support behavioural change at investee companies through long-term, often multi-year stewardship work.

Since his appointment in 2022, the Sub-Manager has introduced a time-bound escalation process to encourage a review and re-appraisal of the engagement approach. Additionally, it has moved from reporting "engagement outcomes" to "objective milestones", allowing for better monitoring and reporting of progress against long-term objectives that may take years for a company to achieve.

As part of the monitoring of the engagement actions undertaken by the Sub-Managers on behalf of any relevant Fund, the Management Company will monitor and evaluate whether there has been a reduction of any relevant principal adverse impact on sustainability factors. Where there is insufficient progress, the Management Company and the Sub-Manager may agree on an action plan which may include the adaption of the relevant policies of the Sub-Manager to reflect updated engagement themes or targeted companies with which there is an engagement as well as to potentially include tangible objectives in line with a specific Fund strategy.

² The average holding period for a company is between five and seven years.

References to international standards

iM Global Partner SAS adhered to the United Nations Principles for Responsible Investment (PRI) in February 2022. In paralell, iM Global Partner started working to support some of the Sub-Managers in becoming PRI signatories themselves. As of the date of this report, eight Sub-Managers (WHEB Asset Management, Polen Capital, Scharf Investments, Dolan McEniry Capital Management, Dynamic Beta investments, Eurizon Capital SGR, Decalia S.A. and Ersel Asset Management SGR S.p.a.) have adhered to the PRI principles whereas the remaining are actively exploring this possibility.

To date, the PRI is considered to be the world's leading proponent of responsible investment. It works to understand the investment implications of environmental, social and governance (ESG) factors, but also to support its international network of investor signatories in incorporating these factors into their investment and ownership decisions. The six principles have a broad reach across ESG factors and sustainable investment applied across asset classes and as a result all PAI may be potentially captured by the UN PRI system.

iM Global Partner continues to study global frameworks on climate and biodiversity and nature-related disclosure, through an evaluation of the requirements of the Task Force for Climate-related Financial Disclosure (TCFD) (and more recently those of the IFRS Foundation, which fully incorporate the TCFD recommendations) which has been and the Taskforce for Nature-related Financial Disclosure (TNFD) frameworks. Climate change and biodiversity loss represent two essential planetary boundaries, and understanding how such international frameworks address these complex themes will allow iM Global Partner and its subsidiaries (including iMGPAM) to appreciate better how we can participate in improving the current situation as a company and as an investor.

On a related note, WHEB Asset Management, the Sub-Manager of iMGP Sustainable Europe Fund has been awarded the French ISR label, which is granted to investment funds with measurable and concrete results, thanks to a proven socially responsible investment methodology. This label also has a global vocation across ESG factors and as a result may be relevant to any PAI.

To assess alignment with the 2015 Paris Agreement, WHEB Asset Management monitors each portfolio company's commitment to limiting global warming to 1.5 °C. The Sub-Manager monitors for any absolute carbon reduction and net-zero targets, and assesses how credible these targets are against a number of governance metrics.

The strategy of iMGP Sustainable Europe Fund as a whole is explicitly designed with a net zero carbon scenario in mind. The Fund invests in companies that enable and benefit from the transition to a net zero and more sustainable economy and are therefore well placed to benefit from more and more aggressive action to tackle climate change. In addition, the Sub-Manager uses scenario planning at the level of individual investments to help forecast expected growth rates for zero carbon technologies.

As indicated in the table above, iMGPAM has implemented a policy of exclusion of investments in companies actively engaged in producing cluster munitions, biological and chemical weapons, anti-personnel mines (all considered "controversial weapons"). According to this policy, a regular exclusion list is built in line with the spirit and framework put in place by the main international agreements in the subject, including the Ottawa Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti-Personnel Mines and on their Destruction dated 1999, the Oslo Convention on cluster munitions dated 2008 and the Luxembourg Law of 4 June 2009. The current Controversial Weapons Policy was approved by the Board of Directors of iM Global Partner Asset Management S.A. in December 2023 and it is reviewed on an annual basis.

The exclusion list is sourced from an external service provider, Sustainalytics.

In addition to the above, investment in a series of countries which are considered by the Management Company in severe violation of human rights is forbidden.

Finally, some of the Funds managed by iMGPAM have put in place exclusion lists based on other international treaties, such as companies which are in severe violation of UN Global Compact and the OECD Guidelines for Multinational Enterprises.

Historical comparison

iMGPAM is issuing this statement for the second consecutive year. Compared to the report issued in 2022, there have been some variations (both upwards and downwards) in relation to the reported data (as described in more detail in the above table) but generally the outcome remains stable with last year's figures (taking into account the change of service providers mentioned above).

Given that the statregy of the Funds has not been materially modified in the reporting period, the principal adverse impacts that are considered by the relevant Sub-Managers have not changed. Reported principal adverse impacts are consistent with the given strategy, asset class and investment philosophy of the Sub-Manager.

With regards to data availability and accuracy, iMGPAM hasn't witnessed major progress from data providers and investee companies although it is expected that will change in the years to come.

iMGPAM continues to follow closely the ESG incorporation process for each relevant Fund as part of its ongoing due diligence on the various Sub-Managers. For the year 2023, there have been no material changes that impact the Funds included in this report as compared to 2022.
